

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method for control and maintenance of an operational organizational structure, involving cryptographic control and maintenance of entities within one or more organizations, the method being automated using a computing device, the method comprising electronically:

associating electronic representations of entities with cryptographic capabilities;

organizing entities within the organizational structure as roles through associating the electronic representations of entities with electronic representations of roles; and

upon any addition, deletion or modification of an entity, a cryptographic capability, or any of their associations, maintaining roles within the organizational structure by adding, deleting or modifying electronic representations of the entities, cryptographic capabilities, roles, or any of their associations.

2. (Original) A method as in claim 1, wherein the method involves at least a public key infrastructure operation.

3. (Original) A method as in claim 1 wherein the control and maintenance further comprises:

assigning elements in said organizational structure to roles within said organizational structure.

4. (Original) A method as in claim 1 wherein the control and maintenance further comprises:

assigning elements in said organizational structure to groups within said organizational structure.

5. (Canceled)

FRANKEL ET AL. — 09/503,181
Client/Matter: 061047-0265650

6. (Original) A method as in claim 3 wherein at least some of said elements are already grouped elements.

7. (Previously Presented) A method as in claim 1 wherein said method involves access control technology.

8. (Previously Presented) A method as in claim 1 wherein said method involves at least an access control operation.

9. (Previously Presented) A method as in claim 1 wherein said method involves at least a data-base operation.

10. (Previously Presented) A method as in claim 1 wherein said method involves at least one operation implemented in a hardware device.

11. (Previously Presented) A method as in claim 1 wherein the operational organizational structure represents at least one commercial organization.

12. (Previously Presented) A method as in claim 1 wherein the operational organizational structure represents at least two organizations, and wherein one of said organizations performs at least one function on behalf of another of said organizations.

13. (Currently Amended) A method as in claim 1 wherein the method further comprises changing software whose authorization is checked.

14. (Previously Presented) A method as in claim 1 wherein the method further comprises changing hardware.

15. (Previously Presented) A method as in claim 1 wherein the method further comprises moving hardware.

Client/Matter: 061047-0265650

16. (Currently Amended) A system for control and maintenance of an operational structure involving at least one cryptographic method, entities within organizations, characteristics of said entities and relationships between said entities, wherein the system comprises code executable by a computing device to~~comprises~~:

~~maintaining electronic representations of~~ capabilities of entities;
~~maintaining electronic representations of~~ functions of entities;
~~maintaining electronic representations of~~ characteristics of entities;
~~maintaining electronic representations of~~ relationships of entities; and
changing the maintained electronic representations of said entities said characteristics and said relationships upon an addition, deletion, or modification of a characteristic or relationship of the entities.

17. (Previously Presented) A system as in claim 16 where at least one of said entities is an individual in an organization.

18. (Previously Presented) A system as in claim 16 where at least one of said entities is a group of individuals in an organization.

19. (Original) A system as in claim 16 where at least one capability is a role in an organization.

20. (Original) A system as in claim 16 where at least one capability is a task in an organization.

21. (Original) A system as in claim 16 where at least one function is an operation by a functionary in an organization.

22. (Original) A system as in claim 16 where at least one function is an operation by a group of functionaries in an organization.

FRANKEL ET AL. -- 09/503,181
Client/Matter: 061047-0265650

23. (Original) A system as in claim 16 where said entities in an organization are represented in a public key infrastructure directory.

24. (Original) A system as in claim 16 where at least one of said characteristics and said relationships is represented in a directory.

25. (Previously Presented) A system as in claim 16 where at least one of said characteristics, at least one of said relationships, or both is represented in a public key infrastructure directory.

26. (Previously Presented) A system as in claim 16 where an operation of said system involves updating at least one directory.

27. (Previously Presented) A system as in claim 16 where an operation of said system involves updating at least one public key infrastructure directory.

28. (Currently Amended) A system as in claim 16 where said code to changing of the said maintained elements comprises code to change of information processing control structure.

29. (Currently Amended) A system as in claim 16 where said code to changing of the said maintained elements comprises code to change of cryptographic certification information within the public-key infrastructure directories.

30. (Currently Amended) A system as in claim 16 where said code to changing of the said maintained elements comprises code to change of databases.

31. (Currently Amended) A system as in claim 16 where said code to changing of the said maintained elements comprises code to change of cryptographic certification information within the public-key infrastructure directories and further database changes.

FRANKEL ET AL. - 09/503,181
Client/Matter: 061047-0265650

32. (Original) A system as in claim 16 where said entities, said characteristics and said relationships are maintained by combining databases components and components of certification authorities of a public key infrastructure.

33. (Original) A system as in claim 16 where said entities are represented in one directory and said characteristics and said relationships are represented in a second directory.

34. (Currently Amended) A system as in claim 16 where said entities are represented in at least a first directory and said characteristics and said relationships are represented in at least a second directory.

35. (Original) A system as in claim 16 comprising observers, where said entities said characteristics and said relationships are partially visible to various observers.

36. (Previously Presented) A system as in claim 16 where an operation of said system comprises cryptographic key management operations.

37. (Previously Presented) A system as in claim 16 where an operation of said system is activated by at least one designated entity amongst said entities.

38. (Previously Presented) A system as in claim 16 where an operation of said system is activated based on agreed upon rules.

39. (Previously Presented) A system as in claim 16 where an operation of said system is activated based on authorizations.

40. (Previously Presented) A system as in claim 16 where an operation of said system comprises database maintenance operations involving said entities said characteristics and said relationships.

FRANKEL ET AL. - 09/503,181
Client/Matter: 061047-0265650

41. (Original) A system as in claim 16 where said characteristics and said relationships define authorization rules.

42. (Original) A system as in claim 16 where said characteristics and said relationships define authorization rules based on access structure.

43. (Original) A system as in claim 16 where said characteristics and said relationships define authorization rules based on cryptographic capability.

44. (Original) A system as in claim 16 where said characteristics and said relationships define authorization rules based on shared cryptographic capability.

45. (Original) A system as in claim 16 with the additional operations of logging said system's operations.

46. (Original) A system as in claim 16 with the additional operations of logging said system's operations, where said logging is performed in various locations in said system.

47. (Original) A system as in claim 16 with the additional operations of monitoring operations within said system.

48. (Original) A system as in claim 16 with the additional operations of time-stamping operations within said system.

49. (Original) A system as in claim 16 where at least one of said system's operations is performed distributedly via communication.

50. (Original) A system as in claim 16 where at least one of said system's operations is a distributed database operation.

FRANKEL ET AL. -- 09/503,181
Client/Matter: 061047-0265650

51. (Original) A system as in claim 16 where at least one of said system's operations involves physical handling of devices to one of said entities.

52. (Currently Amended) A database system representing an organization involving directories representing entities, their characteristics, roles, and relationships together with their associations with cryptographic capabilities, the database system comprising the following transactional components:

connection to cryptographic authorities representing the cryptographic capabilities associated with said entities, said characteristics and said relationships;

a maintenance system by which said database and said cryptographic authorities are maintained in coordination and by authorized parties assuring the representation of said organization and said cryptographic capabilities are soundly associated as defined by the coordination directives; and

maintenance transactions acting within said maintenance system, maintaining a view representing an organization.

53. (Original) A system as in claim 52 wherein said organization comprises a plurality of entities.

54. (Original) A system as in claim 52 wherein said cryptographic authorities is a plurality of at least one certification authorities.

56. (Original) A system as in claim 52 wherein said cryptographic authorities is a plurality of authorities organized hierarchically.

57. (Original) A system as in claim 52 wherein said authorized parties are maintained by another instantiation of the system.

58. (Previously Presented) A system as in claim 52 wherein said authorized parties are assigned by management of said organization.

FRANKEL ET AL. -- 09/503,181
Client/Matter: 061047-0265650

59. (Previously Presented) A system as in claim 52 wherein said coordinating directives involve cryptographic fields assuring integrity of the operation.

60. (Original) A system as in claim 52 wherein said maintaining view representing an organization may present different characteristics and components to different outside reviewers.

61. (Original) A system as in claim 52 wherein said cryptographic capabilities involve digital certificates.

62. (Previously Presented) A system as in claim 52 wherein said organization comprises various organizational units.

63. (Previously Presented) A system as in claim 52 wherein said organization comprises various organizational units where entities are defined in one unit and their roles are defined within a second unit.

64. (New) A method as in claim 1 where a plurality of entities are electronically visible to one part of the organization, a first set of outside viewers, or both, and roles or characteristics thereof are electronically visible to another part of the organization, a second set of outside viewers, or both.

65. (New) A method as in claim 1 where maintaining of roles within the organizational structure is protected and can be performed only by an authorized party inside or outside the organization.

66. (New) A system as in claim 16 where a plurality of entities are electronically visible to one part of the organization, a first set of outside viewers, or both, and roles or characteristics thereof are electronically visible to another part of the organization, a second set of outside viewers, or both.

FRANKEL ET AL. -- 09/503,181
Client/Matter: 061047-0265650

67. (New) A system as in claim 16 where change to the maintained electronic representations of said entities said characteristics or said relationships is protected and can be performed only by an authorized party inside or outside the organization.
